

SMART ASSET TRACKING AND PREDICTIVE MAINTENANCE SYSTEM FOR FLIGHT CATERING

This system uses IoT, GPS, and machine learning to enable real-time tracking and predictive maintenance of flight catering vehicles via the Swift Platform. It reduces downtime, cuts costs, and ensures timely service through automated alerts, ERP ticketing, and a live dashboard.

MISSION ACCOMPLISHED

PREDICT! PREVENT! PERFORM!

HOW DOES IT WORK?

- *IoT sensors collect real-time vehicle data.*
- *ESP32 sends data to the Swift application.*
- *Data is preprocessed and analyzed instantly.*
- *Real-time evaluation detects current anomalies.*
- *ML model forecasts future issues.*
- *Alerts and ERP tickets are generated automatically.*
- *Data is displayed on a dashboard for quick action.*

EVERYTHING YOU NEED!

Live telemetry

Real-time vehicle telemetry monitoring to track performance and detect anomalies.

Smart dashboard

Centralized dashboard showing vehicle health, usage, and maintenance history.

AI predictions

AI-driven predictive analytics to forecast potential failures before they happen.

ERP integration

Automatic ERP integration to generate maintenance work orders seamlessly.

DID YOU KNOW?

GLOBAL TRADE MAGAZINE

"80% of vehicle failures can be prevented with early detection."

WorkTrek

"Predictive maintenance reduces maintenance costs by up to 25%."
